Beginning Solution Est. has a separate specialized HR Outsourcing Division and is actively involved in providing services to its MENA Region and International clients.

We provide complete HR Services to our clients and have expertise of HR Outsourcing in a multiple industries ranging from Financial Sectors to IT Sector

e .DATA MANAGEMENT SERVICES:

Beginning Solution Est. has a separate specialized Data management services Division and is actively involved in providing services to its MENA Region and International clients.

We provide complete services of data management to our clients and have expertise of Data strategy, Data security, Data intelligence, Data visualization, and Data Analytics.

4. DATA MANAGEMENT SERVICES:

A. DATA STRATEGY:

We specialized in developing new organizational design for "Startups" & "SME's" as well as restructuring and review of existing businesses.

BUSINESS REQUIREMENT:

Data must address specific business needs in order to achieve strategic goals and generate real value. Step of defining the business requirement is to identify a champion, all stake holder and smes in the organization. Stake holders and other SMEs will represent specific department or function within the company.

SOURCING & GATHERING DATA:

With a good understanding of what questions the business is asking we can turn to the next element analyzing data sources how the data is gathered and where the data exists.

TURNING DATA INTO INSIGHTS:

A data strategy should provide recommendations for how to apply analytics to extract business critical insights, and data visualization is a key. Many companies still relay on excel email that does not allow interaction with the data.

B. DATA SECURITY:

Data security is the practice of protecting digital information from unauthorized access, corruption or theft throughout its entire lifecycle it's a concept that encompasses every aspect of information security from the physical security of hardware and storage devices to administrative and access controls as well as logical security of software applications. We have experienced and certified trainers

C. DATA INTELLIGENCE:

Data intelligence is a system to deliver trust worthy and reliable data it includes intelligence about data or meta-data, data intelligence helps organization for:

- Who is using what data?
- Where is data and where did it come from?
- When is data being accessed, and when was it last updated
- Why do we have data why do we have to keep it (or discard) data?
- How is data being used or – how should data be used?

Data intelligence supports human understanding by answering key questions around who what where and when

D. DATA VISUALIZATION:

Data visualization is the practice of translating information into visual context, such as a

map or a graph to make data easier for human brain to understand and pull insights from. The main goal of data visualization is to make it easier to identify patterns, trends and outliers in large data sets.

E. DATA ANALYTICS:

Data analytics is the science of analyzing raw data to make conclusion about raw information. Data analytics helps a business optimize its performance, perform more efficiently or make some strategically guided decisions. The technique and process of data analytics have been automated into mechanical process and algorithm that work over raw data for human consumption
